

PartsSource Copywriting Best Practices for Healthcare Communication

PartsSource Copywriting Best Practices

Brand Tagline: *Ensuring healthcare is always on*

1. Purpose of Copy at PartsSource

Copy at PartsSource exists to support a single, unifying promise:

Ensuring healthcare is always on

This is not a slogan—it is a commitment that should be reflected implicitly or explicitly in all copy.

In practice, PartsSource copy must do three things:

1. **Reduce cognitive load** for busy healthcare professionals.
2. **Build trust** in high-stakes environments (patient safety, compliance, uptime).
3. **Drive confident action** that keeps equipment, systems, and care delivery operational.

Every sentence should earn its place by answering one question:

Does this help keep healthcare running—reliably, safely, and without disruption?

2. Core Voice Principles (Non-Negotiables)

2.1 Clear Over Clever

Fact: Healthcare and supply chain users are time-constrained and risk-averse.

Practice:

- Prefer plain language over jargon.
- Say what the thing *is* before what it *does*.
- Avoid marketing euphemisms ("seamless," "next-gen," "robust") unless backed by specifics.

Example:

- ❌ "A seamless, end-to-end procurement experience"

-  “Order, track, and receive medical equipment parts in one system.”
-

2.2 Confidence Without Arrogance

Fact: PartsSource operates in regulated, mission-critical environments.

Practice:

- Write with authority, not hype.
- Avoid exaggerated claims unless legally and operationally defensible.
- Let outcomes and proof points do the work.

Example:

-  “The best platform in healthcare”
 -  “Trusted by thousands of hospitals to manage medical equipment parts.”
-

2.3 Human, Not Casual

Fact: The audience is professional—but still human.

Practice:

- Use natural sentence structure.
 - Avoid slang, emojis, or internet shorthand in formal channels.
 - Write like a smart colleague explaining something clearly.
-

3. Audience-First Writing

3.1 Start With the User’s Job, Not Our Product

Fact: Users think in tasks and problems, not features.

Practice:

- Lead with the pain point or job-to-be-done.
- Introduce the product only after context is established.

Framework:

1. The problem they face
 2. Why it matters (risk, cost, time, compliance)
 3. How PartsSource helps
-

3.2 Respect Domain Expertise

Fact: Many users are subject-matter experts.

Practice:

- Do not over-explain industry fundamentals.
 - Do explain *what's different* or *what's changed*.
 - Avoid condescension or “teaching tone.”
-

4. UX Writing & Product Copy Standards

4.1 Reduce Cognitive Load

Practice:

- One idea per sentence.
- One action per button.
- Use progressive disclosure—don't explain everything at once.

Buttons & CTAs:

- Use verb + outcome
 - “View Order Status”
 - “Request a Quote”
 - “Add to Inventory”
-

4.2 Error Messages & System Feedback

Fact: Errors often occur under stress.

Practice:

- State what happened.
- Explain why (if known).
- Tell the user exactly what to do next.

Example:

-  “Something went wrong.”
 -  “We couldn't submit your order because the part number is missing. Add a part number and try again.”
-

5. Marketing & Campaign Copy

5.1 Be Specific or Be Silent

Fact: Generic claims reduce credibility.

Practice:

- Replace adjectives with data, outcomes, or constraints.
- If you can't quantify, contextualize.

Example:

-  "Save time and money."
 -  "Reduce part sourcing time by consolidating vendors in one platform."
-

5.2 Headlines

Practice:

- Prioritize clarity over cleverness.
- Headlines should stand alone without body copy.

Strong headline test:

Would this still make sense if read in isolation?

6. Thought Leadership & Long-Form Content

6.1 Insight Over Promotion

Fact: Credibility comes from perspective, not product mentions.

Practice:

- Lead with industry insight, trends, or operational realities.
 - Reference PartsSource only where it naturally supports the point.
-

6.2 Evidence-Backed Claims

Practice:

- Distinguish between:
 - **What we know** (data, customer experience, industry standards)
 - **What we believe** (informed interpretation)

Label interpretation clearly.

7. Consistency Rules

7.1 Terminology

Practice:

- Use approved product names consistently.
 - Avoid creating new labels for existing features.
 - When in doubt, default to the term used in the platform UI.
-

7.2 Tone Consistency Across Channels

Fact: Users interact with multiple touchpoints.

Practice:

- Website, product, email, and sales materials should feel written by the same organization.
 - Channel may change *length* and *formality*, not voice.
-

8. Editing & Quality Bar

Before publishing, confirm:

- The primary action is obvious.
- Jargon is necessary and defined.
- Claims are defensible and evidence-based.
- Copy supports **uptime, reliability, and operational continuity**.
- Copy aligns with approved **brand language and terminology**.

Tagline alignment check:

Ask whether the copy clearly supports the promise of *Ensuring healthcare is always on®*—either directly (uptime, availability, readiness) or indirectly (speed, clarity, prevention of failure).

Default rule:

If a sentence doesn't help the user decide or act—or reduce risk—cut it.

9. What Good Looks Like at PartsSource

Good copy at PartsSource is:

- Clear under pressure
- Precise and evidence-backed
- Calm, confident, and direct
- Grounded in real clinical and HTM workflows
- Consistent with PartsSource brand language and visual hierarchy

It should feel like a trusted operational partner—not a marketing layer.

10. One-Pagers & Brochureware Copy Standards

These standards are informed by current PartsSource one-pagers and corporate brand guidelines.

10.1 Structural Best Practices

Fact: One-pagers are often read quickly by executives, HTM leaders, and supply chain decision-makers.

Required structure:

1. **Clear value headline** (what it is + why it matters)
2. **Operational context** (the problem being solved)
3. **Proof or scale** (metrics, adoption, outcomes)
4. **Functional breakdown** (what the solution actually does)
5. **Clear next step** (CTA)

Avoid narrative sprawl. Every section must justify its space.

10.2 Headline & Subhead Rules

- Headlines must stand alone and avoid internal language.
- Subheads should clarify—not repeat—the headline.
- Avoid abstract phrasing; prioritize operational outcomes.

Example pattern:

- Headline: *Centralize operational data into a single source of truth*
 - Subhead: *See parts, repairs, approvals, and risk signals in one dashboard*
-

10.3 Metrics & Proof Points

Fact: Credibility comes from specificity.

Best practices:

- Use concrete metrics (percentages, counts, scale).
- Label projections clearly.
- Tie metrics to outcomes like uptime, cost control, or productivity.

Avoid vague claims like “significant savings” without context.

10.4 CTAs & Button Labeling (Required)

Rule: All CTAs—especially buttons—must be clear, action-led, and predictable. Every CTA should tell the user *exactly* what will happen before they commit.

CTAs must be:

- **Action-oriented**
 - **Low-friction**
 - **Clear about the outcome**
-

Button Labeling Standard: Verb–Subject Only

All button labels must follow a **Verb–Subject** format (e.g., “Download Report,” “Submit Form,” “View Order Status”).

This follows a **Presentation Sequence (PS)** pattern: users first see **what action will occur**, then **what it affects**. This mirrors natural language and established mental models, reducing cognitive load and decision friction.

Why this works (UX rationale):

- **Action-oriented:** Verbs prime users for interaction.
 - **Predictable:** Aligns with common UI patterns, accelerating recognition over recall (Jakob’s Law).
 - **Scannable:** Clear actions improve glanceability and tap accuracy (Fitts’s Law).
 - **Efficient:** Reduces choice complexity in high-pressure workflows (Hick’s Law).
 - **Consistent:** Creates uniform CTA behavior across product, marketing, and collateral.
-

Button Copy Standards

- Always lead with the **action** (verb), followed by the **object** (subject).
- Describe what happens *after* the click—never make the user infer.
- Limit to **2–5 words** whenever possible.
- Use plain, operational language.
- Never rely on color alone to communicate meaning.

Approved Verb–Subject patterns:

- View + object → “View Order Status”
 - Request + artifact → “Request a Quote”
 - Submit + item → “Submit Order”
 - Start + process → “Start Service Request”
 - Download + asset → “Download Overview”
 - Go to + destination → “Go to Command Center”
-

Primary vs. Secondary CTAs

Primary CTAs

- One per screen or page section.
- Reserved for the highest-value action.
- Must directly support uptime, readiness, or operational clarity.

Examples:

- “Resolve Open Repairs”
- “Submit Order”
- “Review Critical Alerts”

Secondary CTAs

- Support learning or exploration.
- Must still follow Verb–Subject rules.
- Should never compete with the primary CTA.

Examples:

- “View Details”
- “Learn More”
- “Download Overview”

CTA Anti-Patterns (Do Not Use)

- **Noun-only labels:** “Report,” “Form,” “Dashboard”
- **Vague actions:** “Click here,” “Continue,” “Get started”
- **Marketing-first language:** “Discover,” “Explore,” “Unlock” (without a concrete object)
- **Overloaded CTAs:** Multiple actions implied in one button

Rule of thumb: Users want to know **what will happen** before they commit.

Urgency & Risk Context

When urgency is required:

- Maintain the Verb–Subject structure.
- Use direct, calm, operational language.
- Avoid emotional or alarmist phrasing.

Good:

- “Address Overdue Repairs”
- “Approve Pending Orders”

Avoid:

- “Fix this now!”
- “Don’t miss out!”

CTA language should reinforce confidence, predictability, and control—not pressure.

11. Brand Language & Trademark Discipline (Copy-Specific)

11.1 Trademark Usage (Copy)

- Use registered marks (®) on first external reference.
 - Use full product names on first mention (e.g., *PartsSource PRO*®).
 - Never pluralize, abbreviate, or verb trademarks.
-

11.2 Required Language Consistency

- Use approved phrases such as:
 - Mission-critical
 - Evidence-based

- Clinical availability
 - Uptime
 - Parts, service, talent, and asset management (in this order)
 - Avoid prohibited language such as:
 - Distributor
 - Vendor
 - Parts company
-

12. Final Principle

PartsSource copy should always reinforce one idea:

When systems fail, healthcare stops. Our job is to make sure it doesn't.

If the copy does not support that outcome, it does not belong.
